

How to change your iPhone's SIM card

Removing and inserting your SIM card can help if you're experiencing a frozen screen or browser connection problems.

It's also a good idea to remove it if you're selling your old phone, sending it out for repairs, or upgrading it.

TO REMOVE AND INSERT THE SIM CARD: FOLLOW THESE STEPS

1

Look on the right side of your iPhone for a tiny hole.

2

Insert the SIM-eject tool or a paperclip into that hole and press.

3

The SIM card tray will pop out. Remove the tray entirely. If there is a SIM card inserted, pop it out and swap it with the SIM card you want to replace.

4

Push the loaded SIM card tray back into place.

Wait for the iPhone to get service, assuming the SIM card is active and compatible with the iPhone.
