

# Help Control Mobile Data on cellular and Wi-Fi

It is not enough to think about managing and securing the data held on your servers or in the cloud services. What about your mobile devices and the data on them?

Liberty Business Mobility Controls is a cloud based private APN solution that is easy to deploy and works for any SIM enabled device (smartphone, laptop, tablet, MiFi, USB dongle, etc.). It continually protects users by filtering out malicious content and other online threats at source. Its threat prevention capability is underpinned by a real-time categorization engine that is continually updated based on ongoing active web analysis and other threat

intelligence feeds. It provides complete visibility of your mobile device estate and offers businesses powerful remediation capabilities through its cloud-based portal.

- No setup costs
- No hardware/software investment required
- Support services are included
- No contract
- Flexible – Scale up for new employees or cancel the service if someone leaves

### Control

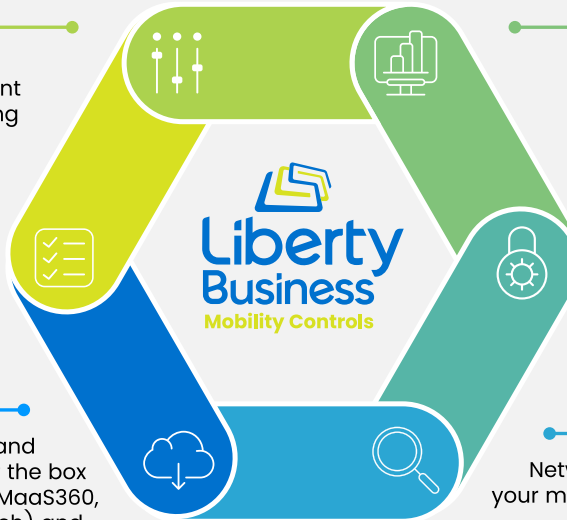

Create a customized mobile business experience with content filtering & data usage monitoring to increase mobile efficiency.

### Compliance

Ensure Mobile data policy compliance for internal corporate policies & assist compliance capability with external industry regulations (e.g. GDPR, HIPAA, SOX).

### Easy to deploy

Device and OS agnostic, easy, and fast to deploy, integrates out of the box with all UEM solutions (e.g. IBM MaaS360, Samsung Knox, VMware AirWatch) and scales with your business.

### Productivity

Avoid a loss in productivity by leverage a higher quality of network service, reduce the distraction of social media and streaming services.

### Security

Network layer-based security policy enforcement for all SIM-based devices across cellular and Wi-Fi. Advanced threat intelligence for zero-day defense and malware threats.

### Actionable insights

Network layer-based visibility into all your mobile data traffic for unparalleled threat alerting and usage-based analytics and insights.

## Protection from the network layer up

Liberty Business Mobility Controls leverages unique network layer-based controls to offer businesses a powerful set of mobile security features that complement existing EMM and MDM solutions. The advance network and device monitoring features ensure that access to data content is controlled, and corporate usage policies are enforced right down to the SIM. The SIM is tamperproof, so even if employees swap the SIM to a different device, policies cannot be by-passed.

Liberty Business Mobility Controls offers a range of additional security features, such as the assignment of private static IP addresses to individual devices, which allows businesses to isolate any compromised devices and restrict connectivity to and from these devices on the network. It also offers Zero Day Protection, which blocks untrusted domains and uncategorized traffic.
